

*This amusing, insightful field guide to the strange mammal known as man will help you identify the males of the species that simply aren't worth your time.*

Although humankind has made remarkable scientific and technological advances, there is still much we don't know about biology and psychology. Why can we send a man to the moon and yet not understand what's going on inside his mind?

Corsen has intensely interacted with men for more than four decades and considers herself an expert on the gender. In *Men: The Field Guide*, she weaves fascinating scientific observations into entertaining tales of her many adventures involving the males of the species.

After spending a lifetime methodically observing the opposite sex, this sweet and witty guide to the mystifying world of men sheds light on this perplexing mystery.

Corsen graciously details her many interactions with men in their native environments, helping readers identify the best of the species and the ones that should come with warning labels.

For each of the seventy-eight categories of men she has identified, she provides information on behavior, habitat, alternate monikers, breeding peculiarities, and learning opportunities, as well as notes on her field encounters (whether disastrous dates or satisfying relationships).

Learn the secrets of the Eginerd, the Timekeeper, and the Woundanoid. Corsen's notes can also serve as a warning. Avoid the Albatross, the Lumuc, the Sperm Donor, and other very unsuitable mates.

Corsen also includes information about the elusive and possibly imaginary Type X, a.k.a. Prince Charming. Despite being a highly sought-after specimen, this variant is rarely if ever found in the wild. Does it even exist?

This comprehensive guide is an invaluable resource for women itching to conduct their own field research and enter that savage environment we call the world of dating. Whether you are looking for someone worth spending your life with or just want to understand the many varieties of males in the world, *Men: The Field Guide* will enlighten and educate you.

Every woman has had experience with at least some of the types of men classified in this tongue-in-cheek guide. Corsen was just the first to classify them based on their weird, worrisome, and sometimes downright bizarre behavior.

To get a sneak peek of this tongue-in-cheek, scientific look into men. Read the [first chapter](#) today. Then submit your humorous field guide encounter, i.e. date or experience with the opposite sex in our [giveaway](#). The submission that receives the most Facebook likes will receive an autographed copy of the book. Good Luck!
